

Research–Policy Divergence

Level 1

Coverage Divergence

*Which SDGs does
each corpus prioritise?*

Measured through SDG distribution

Level 2

Semantic Framing Divergence

*How differently do they
discuss the same SDG?*

Measured through embedding proximity

Topic
adjusted gap
(primary est.)

Register
removed by INLP
(communicative
conventions)

----- **Level 3:** Substantive agreement (problems, actors, interventions) — requires qualitative methods, beyond scope of this study

Semantic proximity is a register-sensitive proxy for framing, not evidence of substantive alignment or policy influence
